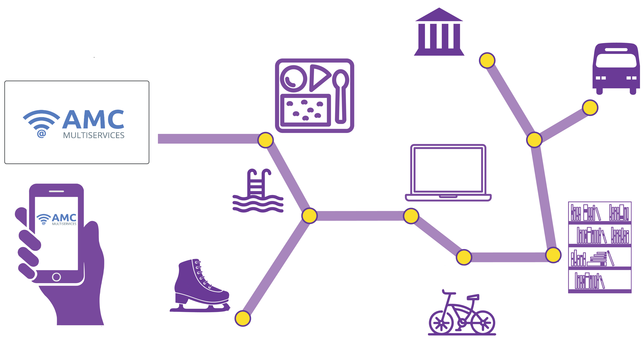
The **ADCET** is a non-profit association for the **development and promotion of digital uses in the territories**.
It brings together more than 50 public and private actors.

ADCET has published an AFNOR standard:

the Citizen Multiservice Application «AMC»

which allows users to use a single support (card or mobile) to access all the services of daily life;
ADCET provides its members with support and guarantees to develop projects in accordance with the General Regulations on Data Protection



This standard transforms a transport card, and tomorrow a mobile, **in daily life card.**

Territories can issue unique medias with three complementary applications:
local ticketing, interoperable ticketing Hoplink and AMC.
All services are thus accessible with **the same support.**
